TREEGRATES

lab.sp.003

The main structure of the LAB.SP treeguard is in cold galvanised and polyester powder coated steel EN10111DD1, T. 50/10. The laser cutting process permits different kinds of decoration and so various patterns and designs are available. The TREEGUARD LAB.SP consists of four or two sections, each one

reinforced by an angular perimeter measuring 30x20 mm, 3 mm thick and fixed with M8 screws. Each TREEGUARD LAB.SP is supplied with an L-shaped counter-frame in 40x25 mm galvanised steel plate, and with a plate (20x200, 3 mm thickness) with brackets for concreting-in.
